

Vision Demo – Task Summary

Scope:

1. Drag and drop a local image file to the upload area for uploading / or click to select a file for uploading
2. The uploaded image is read and stored in an ImageList array. Display them in a grid format

Out of Scope:

1. Clicking an image for processing is not implemented in this demo
2. This Demo is for Front-end UI only, no backend server required

Implementation

3 major **React components** have been written under **./src** folder below. **React Hooks** are used, such as **useCallback**, **useState**, **useDropzone**, etc

- **App.js**
 - An entry component that it generates all the HTML templates
 - Calls the Dropzone component and passes one parameter of onDrop callback function
 - Calls ImageList component and passes all selected image file(s) to it
- **Dropzone.js**
 - Imports and uses the **react-dropzone** library to handle the drag and drop file(s)
 - Drags/Drops multiple files are supported
- **ImageList.js**
 - Renders the selected image(s) inside the grid area

Usage

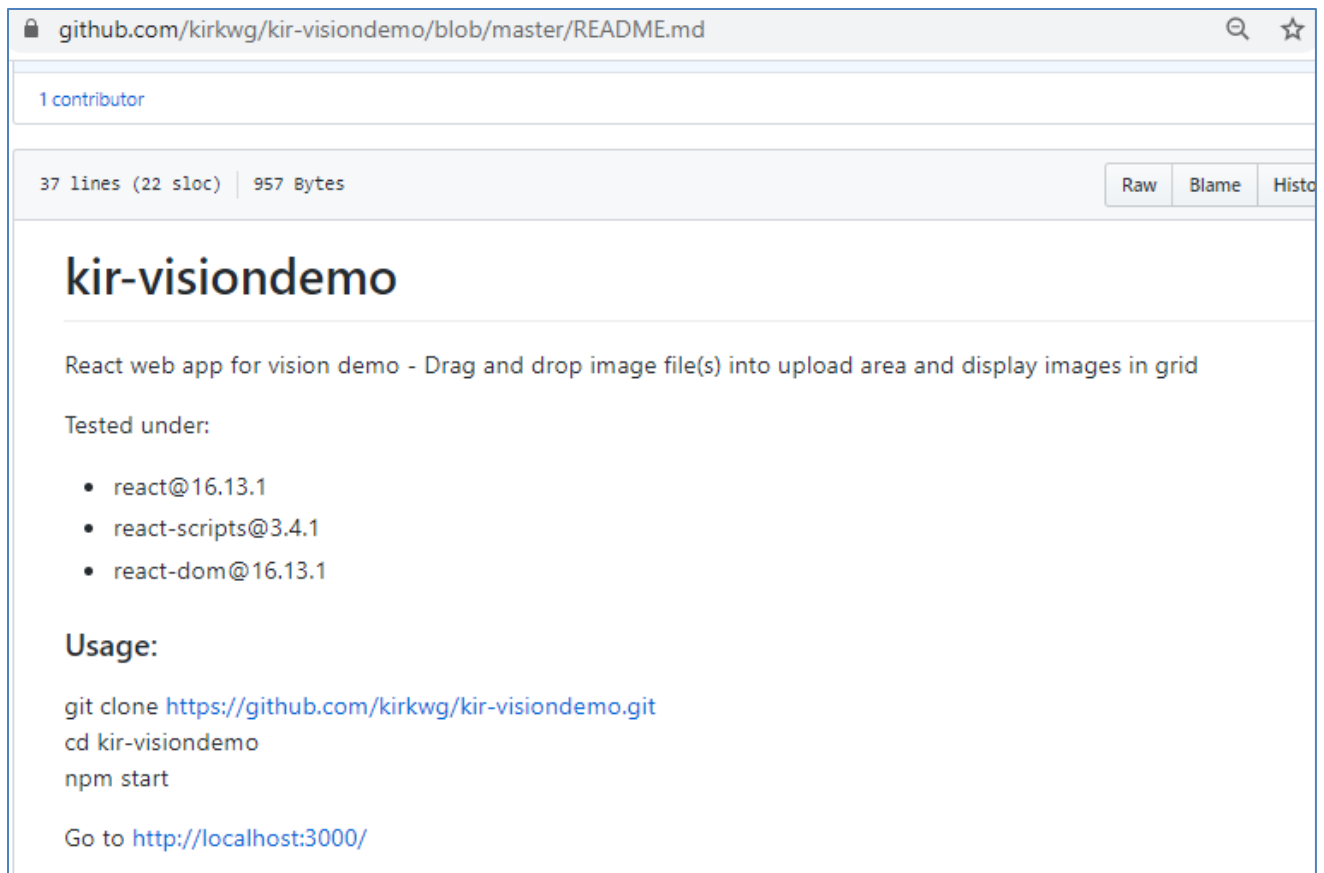

Prerequisite: ***Node.js and NPM should be installed before any demo operation below***

```
git clone https://github.com/kirkwg/kir-visiondemo.git
```

```
cd kir-visiondemo
```

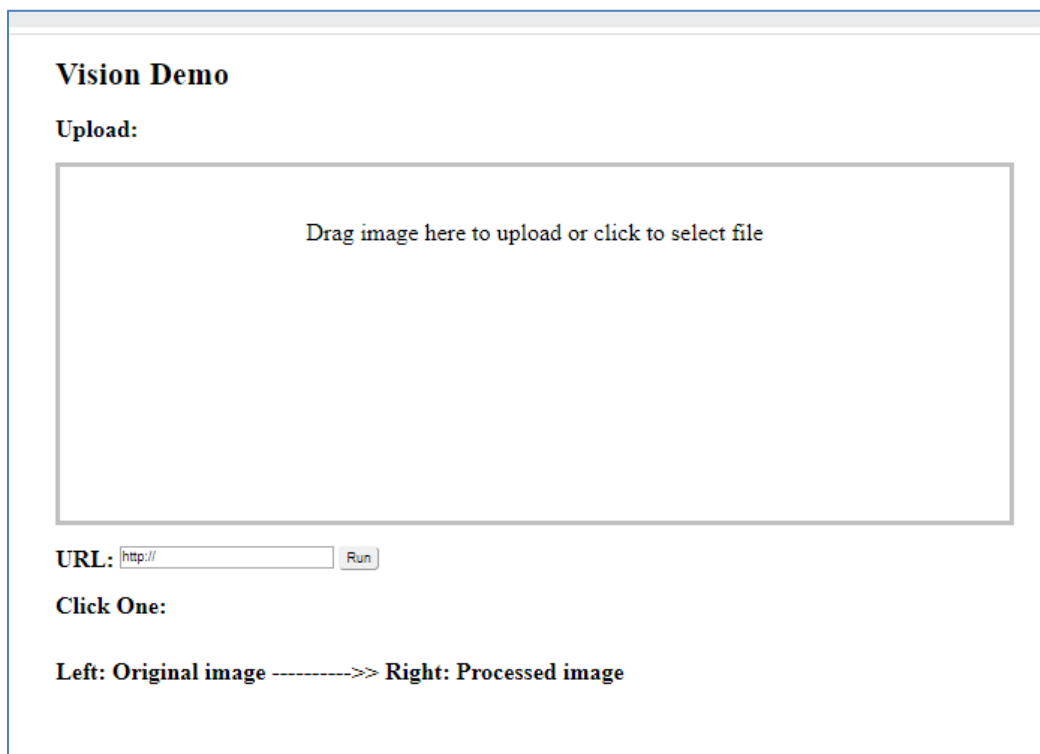

```
npm start
```

Go to <http://localhost:3000/> in Chrome or compatible Browser for seeing results

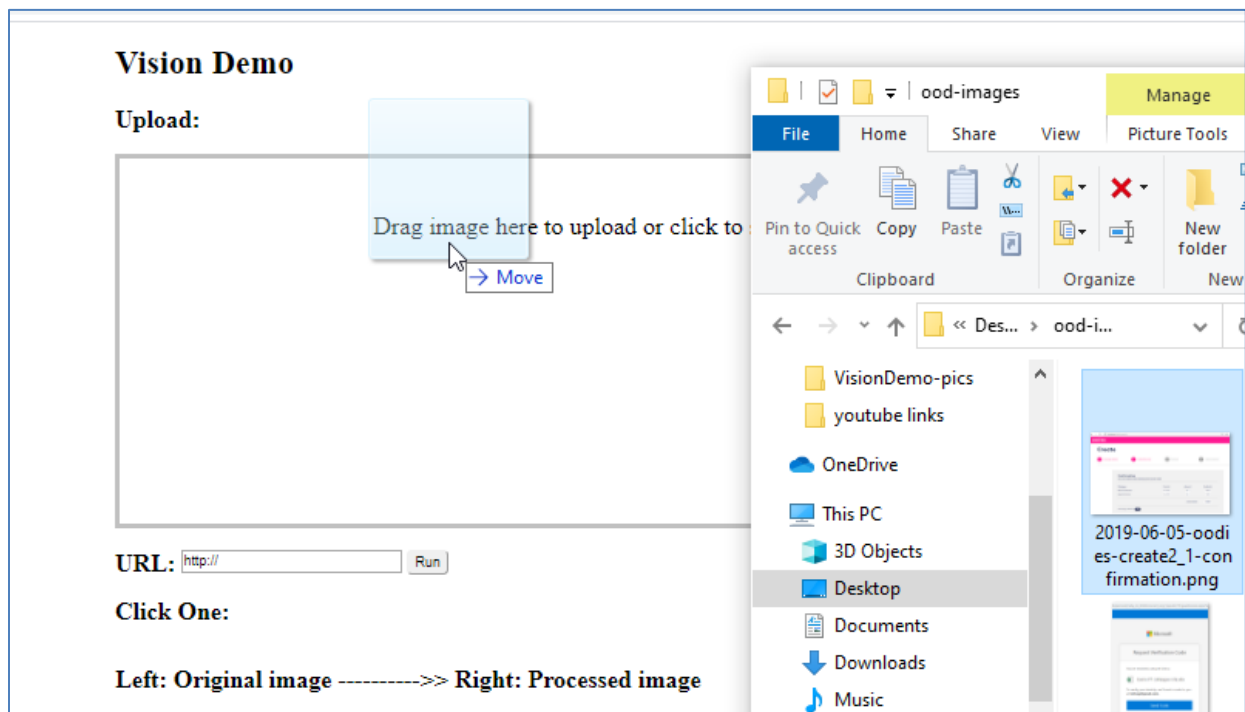

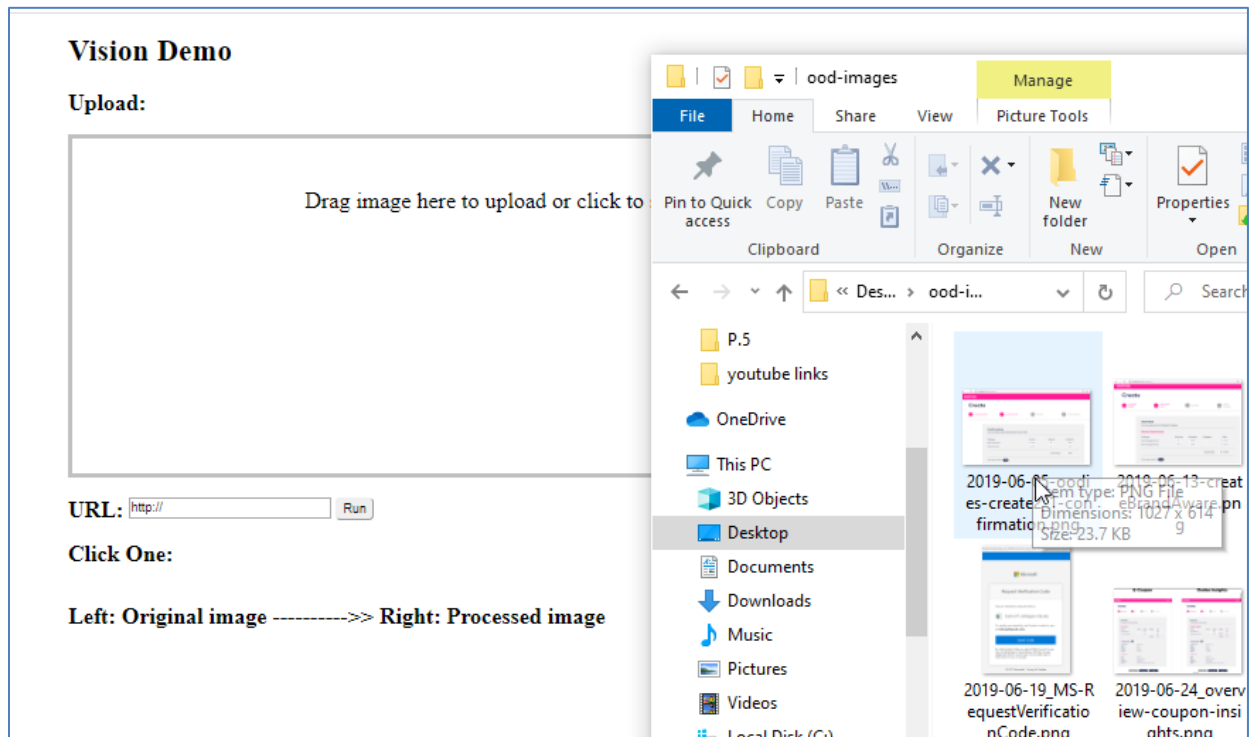

Snapshots for the Vision Demo

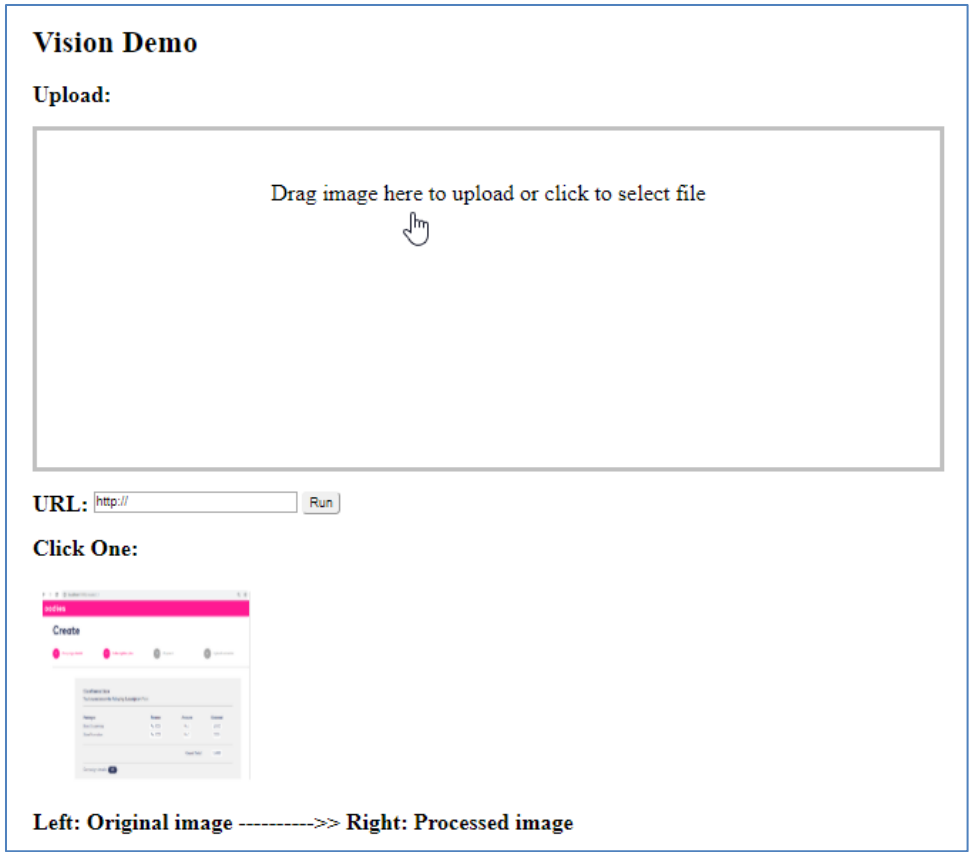

01/ Vision demo begins

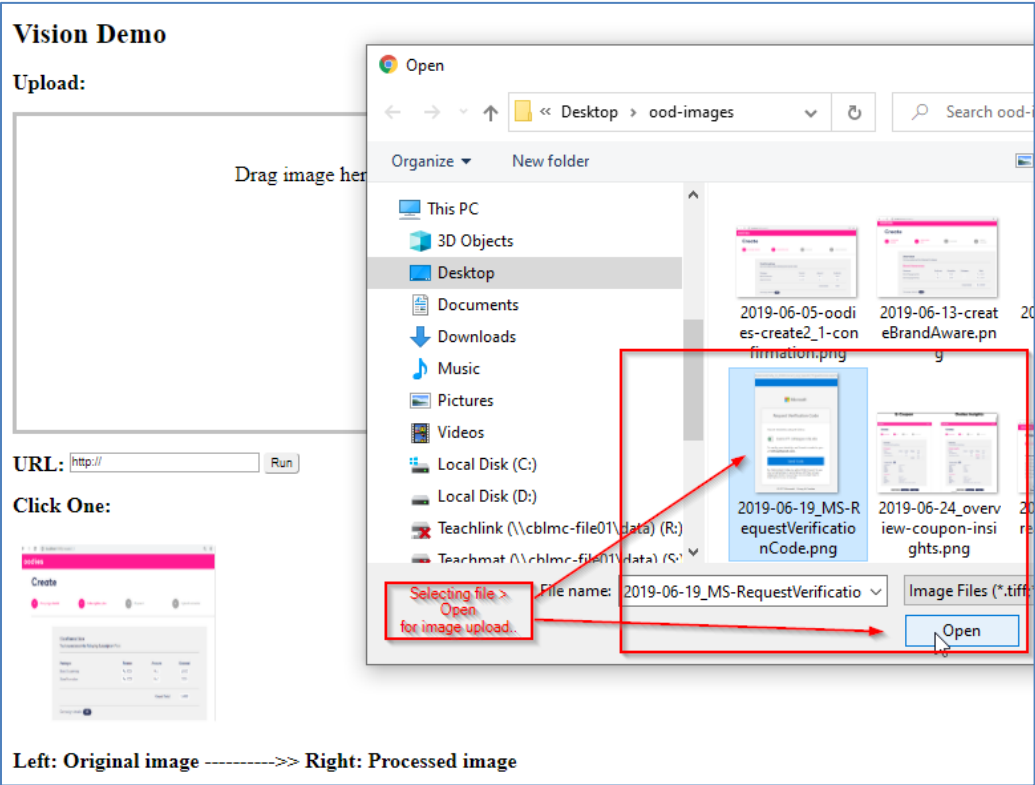

02/ Open a folder > select an image file > drag and drop it into the Upload area

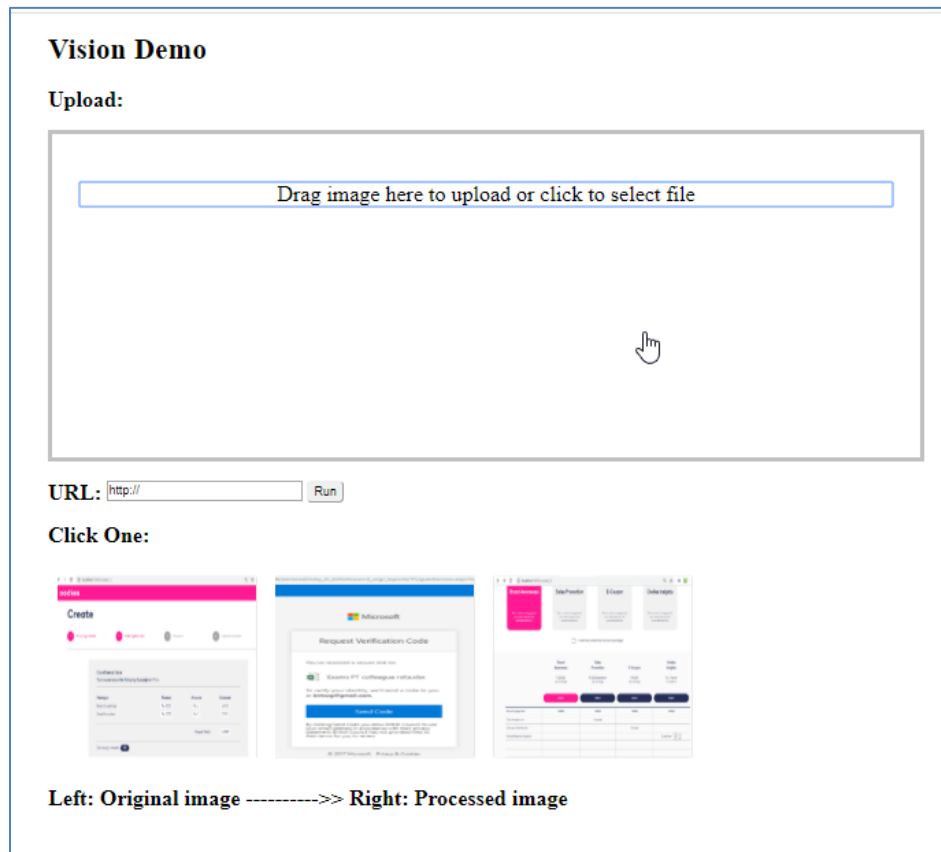

03/ The dropped image is displayed in the grid area below

04/ Alternately, user can click to select an image file, instead of using drag and drop approach

05/ Shows three images uploaded

06/ Looking of the Demo UI was revised a bit
